Subject: Re: Sirenusa Condo Methyl Bromide Release 3/24/15 Update

Thanks for the update, Chris, and for all the work that you and the others are doing.

Your report says that OSCs also conducted interviews with the PRP in effort to gain information on any additional locations where methyl bromide may have been utilized in the past. By "PRP," I am guessing you mean the owner or managing agent of the resort complex. What answer did they give regarding whether there were additional locations? As soon as you guys hear of any add'l locations, please let me and the other ORC and DECA people I'm cc'ing here know immediately. I assume you guys are aware that Terminex on St Thomas told DPNR that the methyl bromide product was used in about 2 other locations in the resort last October. (John G., correct me if I've got that wrong.) Do you guys know which units those were?
